

Big Piñata (Paper)

- fold a paper square (50x50 cm) twice: first so that it forms a triangle, and then fold the triangle again in the reverse direction, so that when you open the paper the 2 folds form a cross or 4 triangles (top, bottom, left & right triangle)

- fold the upper half-rectangle in a way down, so that half of the right triangle extends to the middle of the bottom triangle

- fold the other half of the right triangle to the right border of the bottom triangle

- analogously, fold the lower half of the left triangle in such a way that it extends to the middle of the bottom triangle & you fold the upper half of the left triangle so, that it extends to the left border of the bottom triangle- all in all you get a new two-ply triangle

- fold the upper layer of the triangle in a way that the right lower vertex extends to the upper vertex – the same procedure for the left side (i.e. left lower vertex extends to the upper vertex) – resulting in 2 new smaller triangles

- turn the paper & do the same for the opposite side, resulting in 4 triangles total (2 on each side)

- fold the vertex of the left & right triangle inwards

- do the same on the other side

- fold on every side the new smaller triangles on each other, so that you couldn't see them (s. picture below)

- one vertex is closed (s. left picture) & one is open (s. picture below)

- cut a piece (length: 3-6 cm) from the open vertex; put your hand in the hole & unfold the piñata (you can also unfold it by blowing into the piñata over the open uncut vertex)

- cut overlapping borders, so that the piñata stands (s. picture below)

- brush the piñata inside & outside with the flour-water mix. Also brush the flour-water mix on both side of some pieces of paper (8 of size 7x15 cm and 2 of size 6x13 cm). stick 2 big pieces of paper on every side & the 2 small pieces on the bottom of the piñata (the hole must be left open)

- after drying (s. left picture) put a second coating like the first one on the piñata; then fill it with 1 teaspoon of cereal; paste over the hole with 4 pieces of paper (7x15 cm) & let it dry again (picture below shows a finished piñata)
